CHAPTER XIII

On the imagination, or esemplastic power

O Adam, One Almighty is, from whom
All things proceed, and up to him return,
If not deprav'd from good, created all
Such to perfection, one first matter all,
Endued with various forms, various degrees
Of substance, and, in things that live, of life;
But more refin'd, more spiritous and pure,
As nearer to him plac'd, or nearer tending,
Each in their several active spheres assig'd,
Till body up to spirit work, in bounds
Proportion'd to each kind. So from the root
Springs lighter the green stalk, from thence the leaves
More aery: last the bright consummate flower
Spirits odorous breathes: flowers and their fruit,
Man's nourishment, by gradual scale sublim'd,
To vital spirits aspire: to animal:
To intellectual!—give both life and sense,
Fancy and understanding; whence the soul
REASON receives, and reason is her being,
Discursive or intuitive. [58]

"Sane diceruntur si res corporales nil nisi materiale continerent,
verissime in fluxu consistere, neque habere substantiale quicquam,
quemadmodum et Platonici olim recte agnovere."

"Hinc igitur, praeter pure mathematica et phantasiae subjecta, collegi
quaedam metaphysica solaque mente perceptibilia, esse admittenda et
massae materiali principium quoddam superius et, ut sic dicam, formale
addendum: quandoquidem omnes veritates rerum corporearum ex solis
axiomatis logisticae et geometricae, nempe de magno et parvo, toto
et parte, figura et situ, colligi non possint; sed alia de causa et
effectu, actioneque et passione, accedere debeant, quibus ordinis
rerum rationes salventur. Id principium rerum, an entelecheian an vim
appellemus, non refert, modo meminerimus, per solam Virium notionem
intelligibilibus explicari." [59]

Des Cartes, speaking as a naturalist, and in imitation of Archimedes,
said, give me matter and motion and I will construct you the universe.
We must of course understand him to have meant; I will render the
construction of the universe intelligible. In the same sense the
transcendental philosopher says; grant me a nature having two contrary
forces, the one of which tends to expand infinitely, while the other
strives to apprehend or find itself in this infinity, and I will cause
the world of intelligences with the whole system of their
representations to rise up before you. Every other science presupposes
intelligence as already existing and complete: the philosopher
contemplates it in its growth, and as it were represents its history
to the mind from its birth to its maturity.
The venerable sage of Koenigsberg has preceded the march of this master-thought as an effective pioneer in his essay on the introduction of negative quantities into philosophy, published 1763. In this he has shown, that instead of assailing the science of mathematics by metaphysics, as Berkeley did in his ANALYST, or of sophisticating it, as Wolf did, by the vain attempt of deducing the first principles of geometry from supposed deeper grounds of ontology, it behoved the metaphysician rather to examine whether the only province of knowledge, which man has succeeded in erecting into a pure science, might not furnish materials, or at least hints, for establishing and pacifying the unsettled, warring, and embroiled domain of philosophy. An imitation of the mathematical method had indeed been attempted with no better success than attended the essay of David to wear the armour of Saul. Another use however is possible and of far greater promise, namely, the actual application of the positions which had so wonderfully enlarged the discoveries of geometry, mutatis mutandis, to philosophical subjects. Kant having briefly illustrated the utility of such an attempt in the questions of space, motion, and infinitely small quantities, as employed by the mathematician, proceeds to the idea of negative quantities and the transfer of them to metaphysical investigation. Opposites, he well observes, are of two kinds, either logical, that is, such as are absolutely incompatible; or real, without being contradictory. The former he denominates Nihil negativum irrepraesentabile, the connection of which produces nonsense. A body in motion is something—Aliquid cogitabile; but a body, at one and the same time in motion and not in motion, is nothing, or, at most, air articulated into nonsense. But a motory force of a body in one direction, and an equal force of the same body in an opposite direction is not incompatible, and the result, namely, rest, is real and representable. For the purposes of mathematical calculus it is indifferent which force we term negative, and which positive, and consequently we appropriate the latter to that, which happens to be the principal object in our thoughts. Thus if a man's capital be ten and his debts eight, the subtraction will be the same, whether we call the capital negative debt, or the debt negative capital. But in as much as the latter stands practically in reference to the former, we of course represent the sum as 10-8. It is equally clear that two equal forces acting in opposite directions, both being finite and each distinguished from the other by its direction only, must neutralize or reduce each other to inaction. Now the transcendental philosophy demands; first, that two forces should be conceived which counteract each other by their essential nature; not only not in consequence of the accidental direction of each, but as prior to all direction, nay, as the primary forces from which the conditions of all possible directions are derivative and deducible: secondly, that these forces should be assumed to be both alike infinite, both alike indestructible. The problem will then be to discover the result or product of two such forces, as distinguished from the result of those forces which are finite, and derive their difference solely from the circumstance of their direction. When we have formed a scheme or outline of these two different kinds of force, and of their different results, by the process of discursive reasoning, it will then remain for us to elevate the thesis from notional to actual, by contemplating intuitively this one power with its two inherent indestructible yet counteracting forces, and the results or generations to which their inter-penetration gives existence, in the living principle and in the process of our own self-consciousness. By what instrument this is possible the solution itself will discover, at the same time that it will reveal to and for whom it is possible. Non omnia possimus omnes. There is a philosophic no less than a poetic genius, which is differentiated from the highest perfection of talent, not by degree but by kind.
The counteraction then of the two assumed forces does not depend on their meeting from opposite directions; the power which acts in them is indestructible; it is therefore inexhaustibly re-ebullient; and as something must be the result of these two forces, both alike infinite, and both alike indestructible; and as rest or neutralization cannot be this result; no other conception is possible, but that the product must be a tertium aliquid, or finite generation. Consequently this conception is necessary. Now this tertium aliquid can be no other than an inter-penetration of the counteracting powers, partaking of both.

*     *     *     *     *     *

Thus far had the work been transcribed for the press, when I received the following letter from a friend, whose practical judgment I have had ample reason to estimate and revere, and whose taste and sensibility preclude all the excuses which my self-love might possibly have prompted me to set up in plea against the decision of advisers of equal good sense, but with less tact and feeling.

"Dear C.

"You ask my opinion concerning your Chapter on the Imagination, both as to the impressions it made on myself, and as to those which I think will make on the Public, i.e. that part of the public, who, from the title of the work and from its forming a sort of introduction to a volume of poems, are likely to constitute the great majority of your readers.

"As to myself, and stating in the first place the effect on my understanding, your opinions and method of argument were not only so new to me, but so directly the reverse of all I had ever been accustomed to consider as truth, that even if I had comprehended your premises sufficiently to have admitted them, and had seen the necessity of your conclusions, I should still have been in that state of mind, which in your note in Chap. IV you have so ingeniously evolved, as the antithesis to that in which a man is, when he makes a bull. In your own words, I should have felt as if I had been standing on my head.

"The effect on my feelings, on the other hand, I cannot better represent, than by supposing myself to have known only our light airy modern chapels of ease, and then for the first time to have been placed, and left alone, in one of our largest Gothic cathedrals in a gusty moonlight night of autumn. 'Now in glimmer, and now in gloom;' often in palpable darkness not without a chilly sensation of terror; then suddenly emerging into broad yet visionary lights with coloured shadows of fantastic shapes, yet all decked with holy insignia and mystic symbols; and ever and anon coming out full upon pictures and stone-work images of great men, with whose names I was familiar, but which looked upon me with countenances and an expression, the most dissimilar to all I had been in the habit of connecting with those names. Those whom I had been taught to venerate as almost super-human in magnitude of intellect, I found perched in little fret-work niches, as grotesque dwarfs; while the grotesques, in my hitherto belief, stood guarding the high altar with all the characters of apotheosis. In short, what I had supposed substances were thinned away into shadows, while everywhere shadows were deepened into substances:

If substance might be call'd that shadow seem'd,
For each seem'd either!
"Yet after all, I could not but repeat the lines which you had quoted from a MS. poem of your own in the FRIEND, and applied to a work of Mr. Wordsworth's though with a few of the words altered:

------An Orphic tale indeed,
A tale obscure of high and passionate thoughts
To a strange music chanted!

*Be assured, however, that I look forward anxiously to your great book on the CONSTRUCTIVE PHILOSOPHY, which you have promised and announced: and that I will do my best to understand it. Only I will not promise to descend into the dark cave of Trophonius with you, there to rub my own eyes, in order to make the sparks and figured flashes, which I am required to see.

"So much for myself. But as for the Public I do not hesitate a moment in advising and urging you to withdraw the Chapter from the present work, and to reserve it for your announced treatises on the Logos or communicative intellect in Man and Deity. First, because imperfectly as I understand the present Chapter, I see clearly that you have done too much, and yet not enough. You have been obliged to omit so many links, from the necessity of compression, that what remains, looks (if I may recur to my former illustration) like the fragments of the winding steps of an old ruined tower. Secondly, a still stronger argument (at least one that I am sure will be more forcible with you) is, that your readers will have both right and reason to complain of you. This Chapter, which cannot, when it is printed, amount to so little as an hundred pages, will of necessity greatly increase the expense of the work; and every reader who, like myself, is neither prepared nor perhaps calculated for the study of so abstruse a subject so abstrusely treated, will, as I have before hinted, be almost entitled to accuse you of a sort of imposition on him. For who, he might truly observe, could from your title-page, to wit, "My Literary Life and Opinions," published too as introductory to a volume of miscellaneous poems, have anticipated, or even conjectured, a long treatise on Ideal Realism which holds the same relation in abstruseness to Plotinus, as Plotinus does to Plato. It will be well, if already you have not too much of metaphysical disquisition in your work, though as the larger part of the disquisition is historical, it will doubtless be both interesting and instructive to many to whose unprepared minds your speculations on the esemplastic power would be utterly unintelligible. Be assured, if you do publish this Chapter in the present work, you will be reminded of Bishop Berkeley's Siris, announced as an Essay on Tar-water, which beginning with Tar ends with the Trinity, the omne scibile forming the interspace. I say in the present work. In that greater work to which you have devoted so many years, and study so intense and various, it will be in its proper place. Your prospectus will have described and announced both its contents and their nature; and if any persons purchase it, who feel no interest in the subjects of which it treats, they will have themselves only to blame.

"I could add to these arguments one derived from pecuniary motives, and particularly from the probable effects on the sale of your present publication; but they would weigh little with you compared with the preceding. Besides, I have long observed, that arguments drawn from your own personal interests more often act on you as narcotics than as stimulants, and that in money concerns you have some small portion of pig-nature in your moral idiosyncrasy, and, like these amiable creatures, must occasionally be pulled backward from the boat in order to make you enter it. All success attend you, for if hard thinking and hard reading are merits, you have deserved it.
Your affectionate, etc."

In consequence of this very judicious letter, which produced complete conviction on my mind, I shall content myself for the present with stating the main result of the chapter, which I have reserved for that future publication, a detailed prospectus of which the reader will find at the close of the second volume.

The Imagination then I consider either as primary, or secondary. The primary Imagination I hold to be the living power and prime agent of all human perception, and as a repetition in the finite mind of the eternal act of creation in the infinite I AM. The secondary Imagination I consider as an echo of the former, co-existing with the conscious will, yet still as identical with the primary in the kind of its agency, and differing only in degree, and in the mode of its operation. It dissolves, diffuses, dissipates, in order to recreate: or where this process is rendered impossible, yet still at all events it struggles to idealize and to unify. It is essentially vital, even as all objects (as objects) are essentially fixed and dead.

FANCY, on the contrary, has no other counters to play with, but fixities and definites. The fancy is indeed no other than a mode of memory emancipated from the order of time and space; while it is blended with, and modified by that empirical phaenomenon of the will, which we express by the word Choice. But equally with the ordinary memory the Fancy must receive all its materials ready made from the law of association.

CHAPTER XIV

Occasion of the Lyrical Ballads, and the objects originally proposed--Preface to the second edition--The ensuing controversy, its causes and acrimony--Philosophic definitions of a Poem and Poetry with scholia.

During the first year that Mr. Wordsworth and I were neighbours, our conversations turned frequently on the two cardinal points of poetry, the power of exciting the sympathy of the reader by a faithful adherence to the truth of nature, and the power of giving the interest of novelty by the modifying colours of imagination. The sudden charm, which accidents of light and shade, which moon-light or sunset diffused over a known and familiar landscape, appeared to represent the practicability of combining both. These are the poetry of nature. The thought suggested itself--(to which of us I do not recollect)--that a series of poems might be composed of two sorts. In the one, the incidents and agents were to be, in part at least, supernatural; and the excellence aimed at was to consist in the interesting of the affections by the dramatic truth of such emotions, as would naturally accompany such situations, supposing them real. And real in this sense they have been to every human being who, from whatever source of delusion, has at any time believed himself under supernatural agency. For the second class, subjects were to be chosen from ordinary life; the characters and incidents were to be such as will be found in every village and its vicinity, where there is a meditative and feeling mind to seek after them, or to notice them, when they present themselves.

In this idea originated the plan of the LYRICAL BALLADS; in which it was agreed, that my endeavours should be directed to persons and characters supernatural, or at least romantic; yet so as to transfer
from our inward nature a human interest and a semblance of truth sufficient to procure for these shadows of imagination that willing suspension of disbelief for the moment, which constitutes poetic faith. Mr. Wordsworth, on the other hand, was to propose to himself as his object, to give the charm of novelty to things of every day, and to excite a feeling analogous to the supernatural, by awakening the mind's attention to the lethargy of custom, and directing it to the loveliness and the wonders of the world before us; an inexhaustible treasure, but for which, in consequence of the film of familiarity and selfish solicitude, we have eyes, yet see not, ears that hear not, and hearts that neither feel nor understand.

With this view I wrote THE ANCIENT MARINER, and was preparing among other poems, THE DARK LADIE, and the CHRISTABEL, in which I should have more nearly realized my ideal, than I had done in my first attempt. But Mr. Wordsworth's industry had proved so much more successful, and the number of his poems so much greater, that my compositions, instead of forming a balance, appeared rather an interpolation of heterogeneous matter. Mr. Wordsworth added two or three poems written in his own character, in the impassioned, lofty, and sustained diction, which is characteristic of his genius. In this form the LYRICAL BALLADS were published; and were presented by him, as an experiment, whether subjects, which from their nature rejected the usual ornaments and extra-colloquial style of poems in general, might not be so managed in the language of ordinary life as to produce the pleasurable interest, which it is the peculiar business of poetry to impart. To the second edition he added a preface of considerable length; in which, notwithstanding some passages of apparently a contrary import, he was understood to contend for the extension of this style to poetry of all kinds, and to reject as vicious and indefensible all phrases and forms of speech that were not included in what he (unfortunately, I think, adopting an equivocal expression) called the language of real life. From this preface, prefixed to poems in which it was impossible to deny the presence of original genius, however mistaken its direction might be deemed, arose the whole long-continued controversy. For from the conjunction of perceived power with supposed heresy I explain the inveteracy and in some instances, I grieve to say, the acrimonious passions, with which the controversy has been conducted by the assailants.

Had Mr. Wordsworth's poems been the silly, the childish things, which they were for a long time described as being had they been really distinguished from the compositions of other poets merely by meanness of language and inanity of thought; had they indeed contained nothing more than what is found in the parodies and pretended imitations of them; they must have sunk at once, a dead weight, into the slough of oblivion, and have dragged the preface along with them. But year after year increased the number of Mr. Wordsworth's admirers. They were found too not in the lower classes of the reading public, but chiefly among young men of strong sensibility and meditative minds; and their admiration (inflamed perhaps in some degree by opposition) was distinguished by its intensity, I might almost say, by its religious fervour. These facts, and the intellectual energy of the author, which was more or less consciously felt, where it was outwardly and even boisterously denied, meeting with sentiments of aversion to his opinions, and of alarm at their consequences, produced an eddy of criticism, which would of itself have borne up the poems by the violence with which it whirled them round and round. With many parts of this preface in the sense attributed to them and which the words undoubtedly seem to authorize, I never concurred; but on the contrary objected to them as erroneous in principle, and as contradictory (in appearance at least) both to other parts of the same preface, and to
the author's own practice in the greater part of the poems themselves. Mr. Wordsworth in his recent collection has, I find, degraded this prefatory disquisition to the end of his second volume, to be read or not at the reader's choice. But he has not, as far as I can discover, announced any change in his poetic creed. At all events, considering it as the source of a controversy, in which I have been honoured more than I deserve by the frequent conjunction of my name with his, I think it expedient to declare once for all, in what points I coincide with the opinions supported in that preface, and in what points I altogether differ. But in order to render myself intelligible I must previously, in as few words as possible, explain my views, first, of a Poem; and secondly, of Poetry itself, in kind, and in essence.

The office of philosophical disquisition consists in just distinction; while it is the privilege of the philosopher to preserve himself constantly aware, that distinction is not division. In order to obtain adequate notions of any truth, we must intellectually separate its distinguishable parts; and this is the technical process of philosophy. But having so done, we must then restore them in our conceptions to the unity, in which they actually co-exist; and this is the result of philosophy. A poem contains the same elements as a prose composition; the difference therefore must consist in a different combination of them, in consequence of a different object being proposed. According to the difference of the object will be the difference of the combination. It is possible, that the object may be merely to facilitate the recollection of any given facts or observations by artificial arrangement; and the composition will be a poem, merely because it is distinguished from prose by metre, or by rhyme, or by both conjointly. In this, the lowest sense, a man might attribute the name of a poem to the well-known enumeration of the days in the several months;

"Thirty days hath September,  
April, June, and November," etc.

and others of the same class and purpose. And as a particular pleasure is found in anticipating the recurrence of sounds and quantities, all compositions that have this charm super-added, whatever be their contents, may be entitled poems.

So much for the superficial form. A difference of object and contents supplies an additional ground of distinction. The immediate purpose may be the communication of truths; either of truth absolute and demonstrable, as in works of science; or of facts experienced and recorded, as in history. Pleasure, and that of the highest and most permanent kind, may result from the attainment of the end; but it is not itself the immediate end. In other works the communication of pleasure may be the immediate purpose; and though truth, either moral or intellectual, ought to be the ultimate end, yet this will distinguish the character of the author, not the class to which the work belongs. Blest indeed is that state of society, in which the immediate purpose would be baffled by the perversion of the proper ultimate end; in which no charm of diction or imagery could exempt the BATHYLLUS even of an Anacreon, or the ALEXIS of Virgil, from disgust and aversion!

But the communication of pleasure may be the immediate object of a work not metrically composed; and that object may have been in a high degree attained, as in novels and romances. Would then the mere superaddition of metre, with or without rhyme, entitle these to the name of poems? The answer is, that nothing can permanently please, which does not contain in itself the reason why it is so, and not
otherwise. If metre be superadded, all other parts must be made consonant with it. They must be such, as to justify the perpetual and distinct attention to each part, which an exact correspondent recurrence of accent and sound are calculated to excite. The final definition then, so deduced, may be thus worded. A poem is that species of composition, which is opposed to works of science, by proposing for its immediate object pleasure, not truth; and from all other species--(having this object in common with it)--it is discriminated by proposing to itself such delight from the whole, as is compatible with a distinct gratification from each component part.

Controversy is not seldom excited in consequence of the disputants attaching each a different meaning to the same word; and in few instances has this been more striking, than in disputes concerning the present subject. If a man chooses to call every composition a poem, which is rhyme, or measure, or both, I must leave his opinion uncontroverted. The distinction is at least competent to characterize the writer's intention. If it were subjoined, that the whole is likewise entertaining or affecting, as a tale, or as a series of interesting reflections; I of course admit this as another fit ingredient of a poem, and an additional merit. But if the definition sought for be that of a legitimate poem, I answer, it must be one, the parts of which mutually support and explain each other; all in their proportion harmonizing with, and supporting the purpose and known influences of metrical arrangement. The philosophic critics of all ages coincide with the ultimate judgment of all countries, in equally denying the praises of a just poem, on the one hand, to a series of striking lines or distiches, each of which, absorbing the whole attention of the reader to itself, becomes disjoined from its context, and forms a separate whole, instead of a harmonizing part; and on the other hand, to an unsustained composition, from which the reader collects rapidly the general result unattracted by the component parts. The reader should be carried forward, not merely or chiefly by the mechanical impulse of curiosity, or by a restless desire to arrive at the final solution; but by the pleasureable activity of mind excited by the attractions of the journey itself. Like the motion of a serpent, which the Egyptians made the emblem of intellectual power; or like the path of sound through the air;--at every step he pauses and half recedes; and from the retrogressive movement collects the force which again carries him onward. Praecipitandus est liber spiritus, says Petronius most happily. The epithet, liber, here balances the preceding verb; and it is not easy to conceive more meaning condensed in fewer words.

But if this should be admitted as a satisfactory character of a poem, we have still to seek for a definition of poetry. The writings of Plato, and Jeremy Taylor, and Burnet's Theory of the Earth, furnish undeniable proofs that poetry of the highest kind may exist without metre, and even without the contradistinguishing objects of a poem. The first chapter of Isaiah--(indeed a very large portion of the whole book)--is poetry in the most emphatic sense; yet it would be not less irrational than strange to assert, that pleasure, and not truth was the immediate object of the prophet. In short, whatever specific import we attach to the word, Poetry, there will be found involved in it, as a necessary consequence, that a poem of any length neither can be, nor ought to be, all poetry. Yet if an harmonious whole is to be produced, the remaining parts must be preserved in keeping with the poetry; and this can be no otherwise effected than by such a studied selection and artificial arrangement, as will partake of one, though not a peculiar property of poetry. And this again can be no other than the property of exciting a more continuous and equal attention than the language of prose aims at, whether colloquial or written.
My own conclusions on the nature of poetry, in the strictest use of
the word, have been in part anticipated in some of the remarks on the
Fancy and Imagination in the early part of this work. What is poetry?
--is so nearly the same question with, what is a poet?--that the answer
to the one is involved in the solution of the other. For it is a
distinction resulting from the poetic genius itself, which sustains
and modifies the images, thoughts, and emotions of the poet's own
mind.

The poet, described in ideal perfection, brings the whole soul of man
into activity, with the subordination of its faculties to each other
according to their relative worth and dignity. He diffuses a tone and
spirit of unity, that blends, and (as it were) fuses, each into each,
by that synthetic and magical power, to which I would exclusively
appropriate the name of Imagination. This power, first put in action
by the will and understanding, and retained under their irremissive,
though gentle and unnoticed, control, laxis effertur habenis, reveals
"itself in the balance or reconcilement of opposite or discordant"
qualities: of sameness, with difference; of the general with the
concrete; the idea with the image; the individual with the
representative; the sense of novelty and freshness with old and
familiar objects; a more than usual state of emotion with more than
usual order; judgment ever awake and steady self-possession with
enthusiasm and feeling profound or vehement; and while it blends and
harmonizes the natural and the artificial, still subordinates art to
nature; the manner to the matter; and our admiration of the poet to
our sympathy with the poetry. Doubtless, as Sir John Davies observes
of the soul--(and his words may with slight alteration be applied, and
even more appropriately, to the poetic Imagination)---

Doubtless this could not be, but that she turns
Bodies to spirit by sublimation strange,
As fire converts to fire the things it burns,
As we our food into our nature change.

From their gross matter she abstracts their forms,
And draws a kind of quintessence from things;
Which to her proper nature she transforms
To bear them light on her celestial wings.

Thus does she, when from individual states
She doth abstract the universal kinds;
Which then re-clothed in divers names and fates
Steal access through the senses to our minds.

Finally, Good Sense is the Body of poetic genius, Fancy its Drapery,
Motion its Life, and Imagination the Soul that is everywhere, and in
each; and forms all into one graceful and intelligent whole.
